

Global Cable ULJ Universal Land Cable / Beach Joint -for Powered (Repeated) and Unpowered (Unrepeated) Submarine Cable Systems

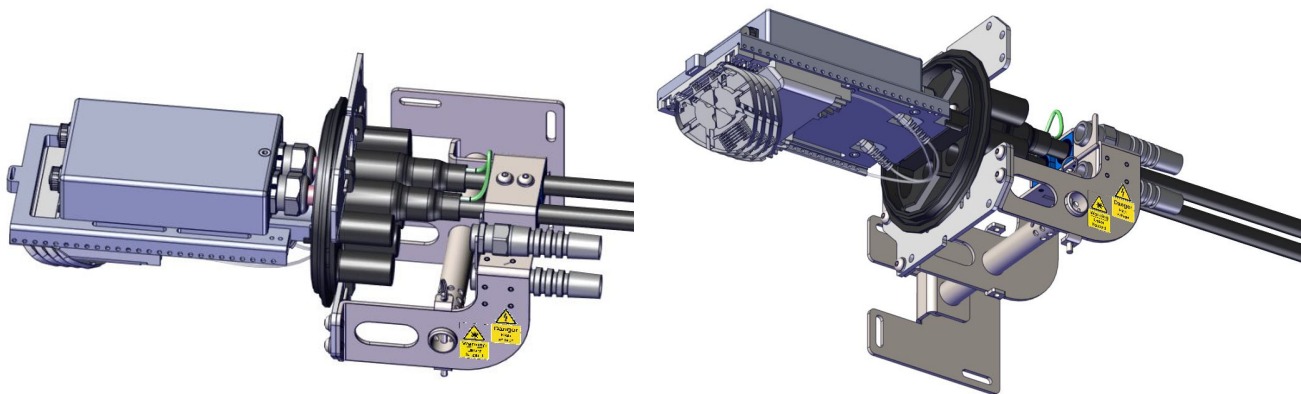

The Global Cable Universal Land/Beach Joint (ULJ) offers a 'One Size Fits All' solution for connecting Land Cable and Shore End Cables currently used for powered and unpowered submarine cable systems.

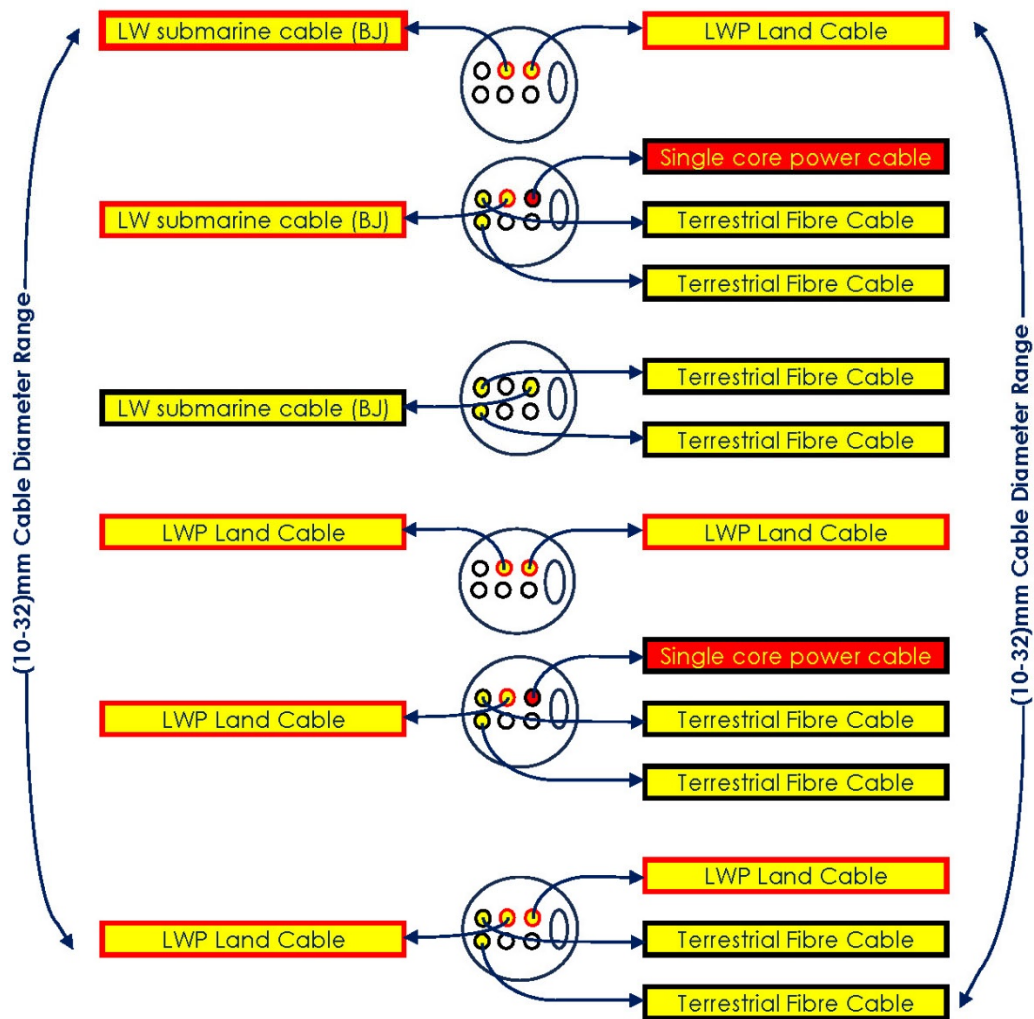

This is *the answer* for cable suppliers, operators and maintenance providers to construct and maintain cable systems of different types with a truly single universal component kit.

Features:

- Single ended joint concept / all cables entering in one end of the joint - easy for manhole installation.
- Easy to assemble, minimal tooling, joiner friendly design.
- Single component kit supplied is compatible with multiple /versatile joint and cable configurations.
- Robust HV design – electrical components are resin encapsulated for mechanical, electrical, moisture and aging resistance.
- Robust mechanical design that secures cables external to the joint and protects against any internal cable, conductor or fibre movement. Stainless Steel 316 components
- Tough, impact Resistant Commscope polymer casing.
- Base and dome sealed with Commscope clamp and O-ring system
- Up to 2 Additional fibre cables can be installed / spliced into any joint at the time of installation or afterwards.
- 144 fibre capacity with closure shown.
- Qualified for 5m depth continuous water immersion / IP68 / IEC61300
- HV tested in line with industry standard
- Pressurised for protection against moisture ingress
- Stainless Steel Mounting Bracket and fixings included with a single pin locking system
